Systems Thinking and Policy Coherence

Icebreaker

Systems thinking to leverage policy coherence: basics on systems thinking

Video

CLEWS nexus approach

Presentation SDG synergies approach in Mongolia

Lessons learned and could this be expanded to the broader SDG framework?

Readiness assessment building block 3

Wrap up and identification of actions/ challenges

What comes to your mind when you think about systems or systems thinking?

Mentimeter or spontaneous reactions of individual participants in the room

Mentimeter

Post it notes

A system is a group of interacting, interdependent parts – the actors that form a complex whole.

A system separates the actors from their environment through boundaries.

Outcomes, performance, or behaviour of the system emerge from the interactions of the actors

Examples: buyers and sellers make a market system, borrowers and lenders make a banking system, representative and represented make a democratic system

Systems Thinking is the use of scientific methods for seeing wholes.

It is a framework for seeing interrelationships, rather than things, for seeing patterns of change, rather than static snapshots.

P. Senge

Evidence of the benefits of applying systems thinking to the transition to achieving sustainability

Sub-nationally disaggregated effects of green revolution policies in Rwanda:

While the policies resulted in falling poverty rates on the national level, they exacerbated landlessness and inequality for poorer rural inhabitants. While this agricultural policy led to progress towards SDG 1, it did not necessarily lead to a reduction in inequality, as called for by SDG 10.

bonuses

Emigration 300,000 in 2022 (40%);
73,000 2023
Inflation 50.6%
Income tax highest rate 36%
Still increasing
Potential of air traffic control breaking
down soon
If more doctors leave: rural health
Provisions crippled
Remittances increased

Thru state-run employment agency & social media:
Incentives to work overseas for IT, nursing, care giving
people in Qatar, Saudi Arabia, Kuwait

Reduce public sector wage bill: 5 y. unpaid leave
of staff remote \$100-500 /month if they find
work abroad

[Systems Change: Overview – YouTube](#)

Our Theories of Change rarely recognize systems as causes of change

Public policy and programs to accomplish SDG rarely recognize the systems that are required to accomplish the goals

Unintended change is rarely considered in the policy planning process

Interventions rarely recognize the leverage points in systems to accomplish goals making them expensive and often counterproductive

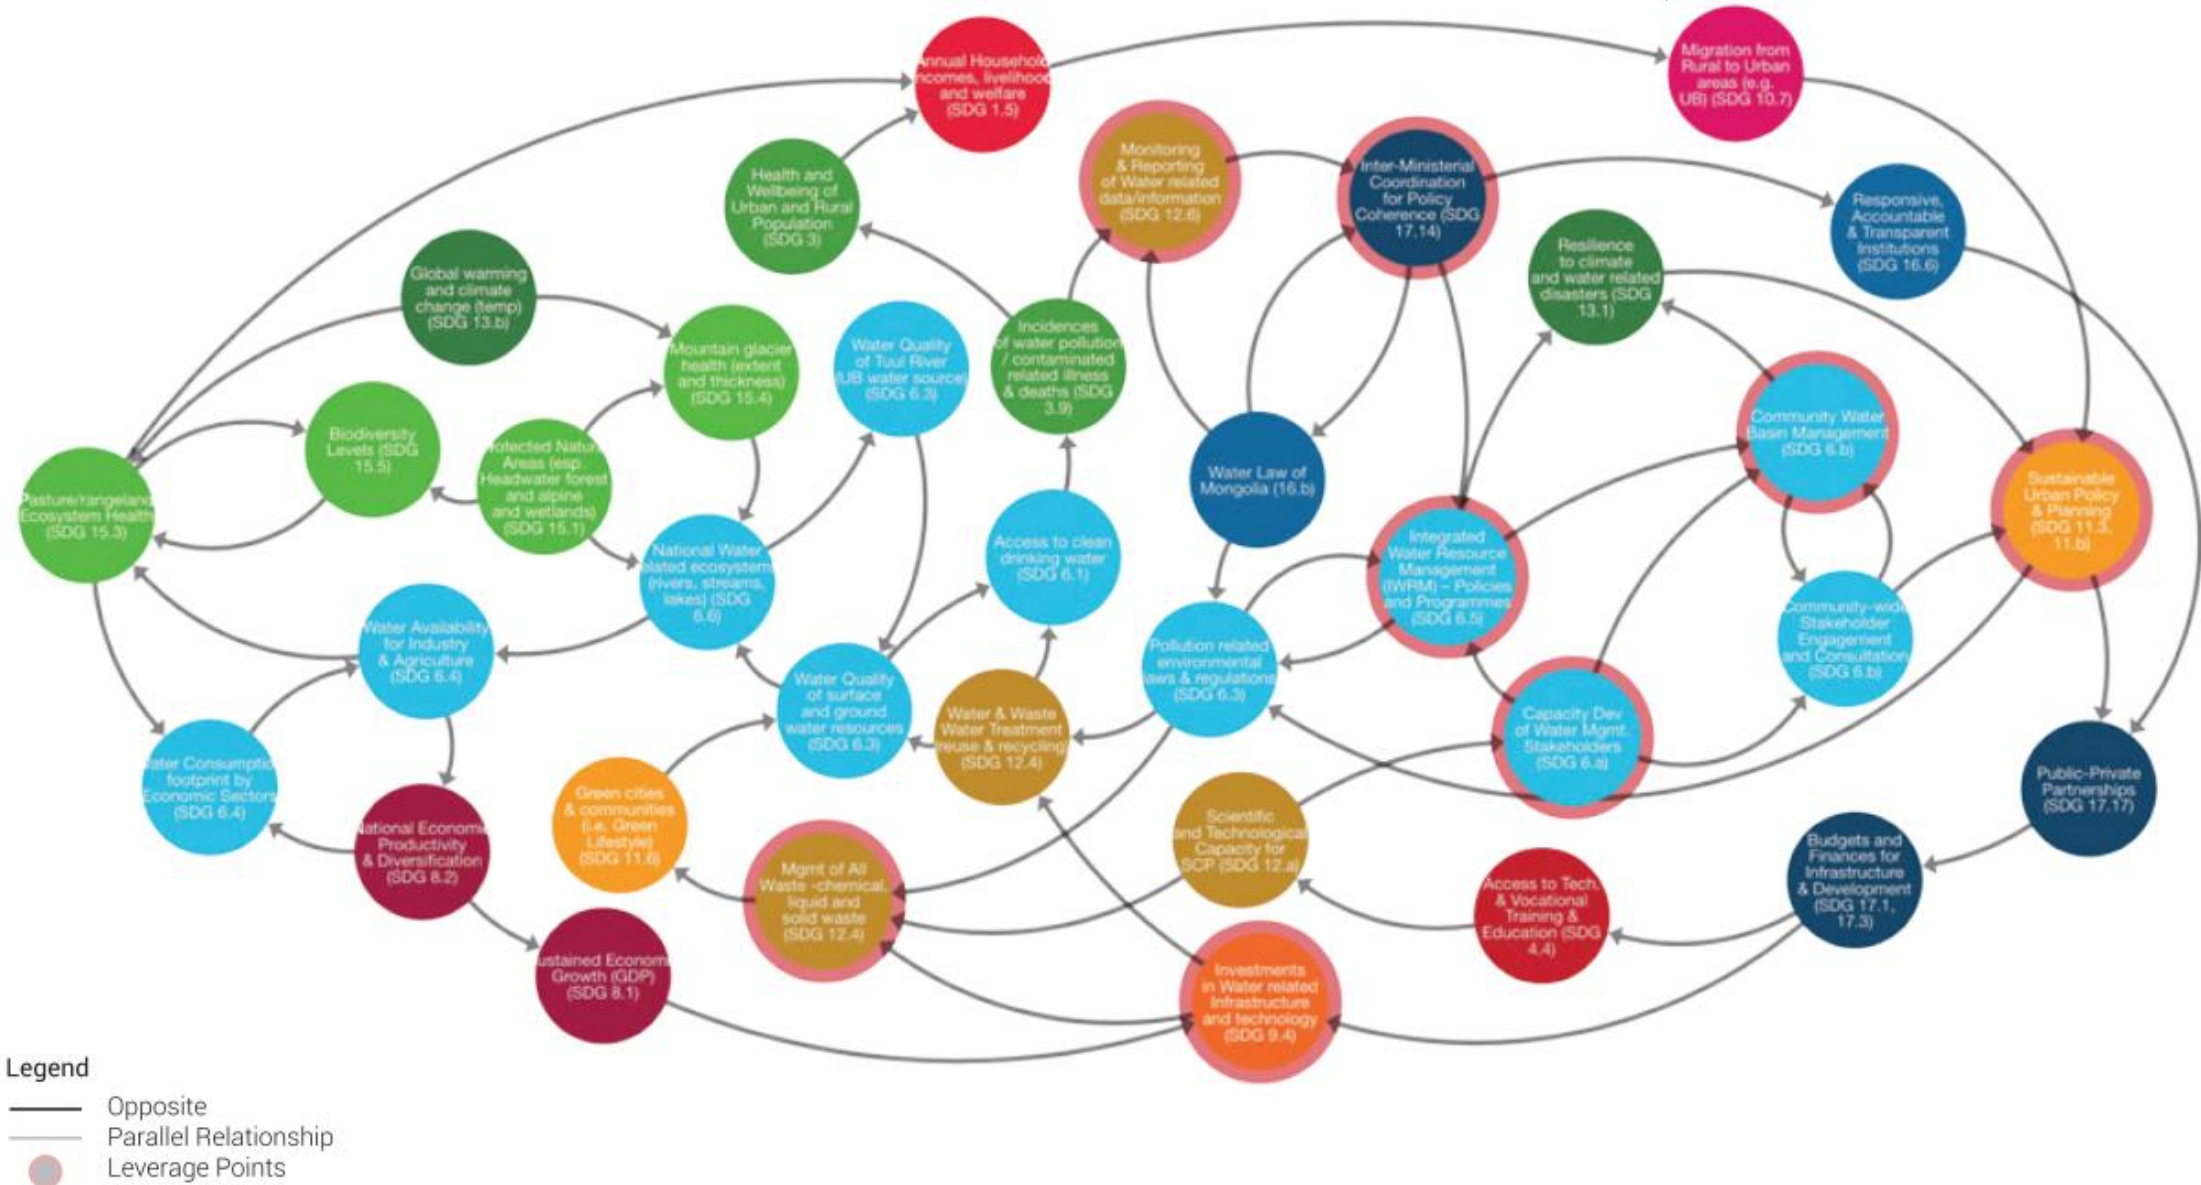

Linear causal analysis is not sufficient.

Systems thinking helps overcome these limitations and grasp the complexity of interactions.

As a result, leverage points in the system can be identified.

Mongolia Water Management System Map at Goal and Targets Level (to attain SDGs 6,7,8, 17)
